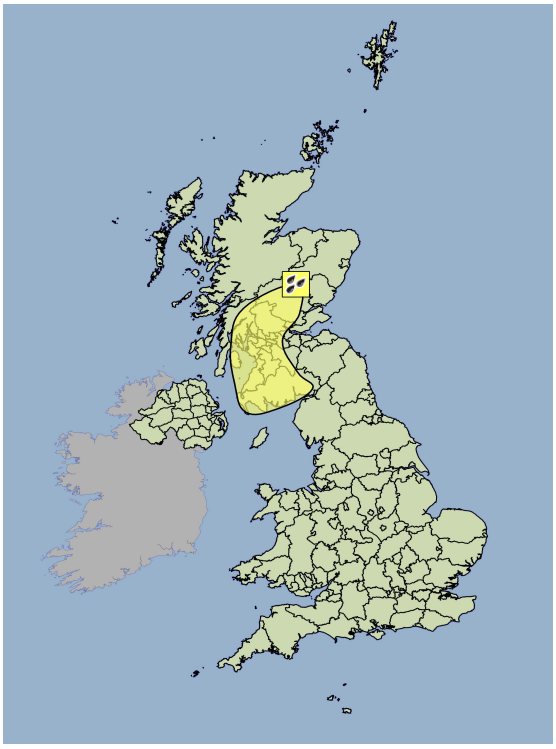
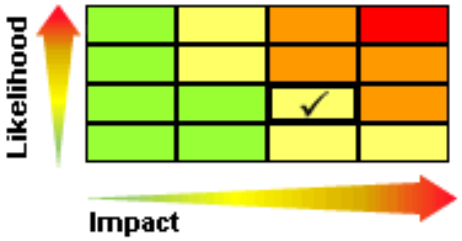
National Severe Weather Warning Service





Chief Forecasters Assessment
An active frontal system will move eastwards across Scotland during Sunday night and Monday morning, bringing a spell of heavy rain to southwestern and central areas. The largest rainfall totals will be over upland areas exposed to the strong south to southwesterly winds, notably Dumfries and Galloway.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:05 on Mon, 30th Dec 2013** until **12:00 on Mon, 30th Dec 2013**

Further rain is expected later on Sunday, becoming heavy overnight and on Monday morning. Rainfall accumulations of 20 to 30 mm are expected widely, with 50-60 mm over high ground.

The rain will fall on already saturated ground, so the public should be aware of the risk of localised flooding.

This is an update to the Alert issued on Saturday.
